

New Features Integration Summary: Required Actions: Rs 3000

1. Database Enhancements

- Design and implement a new **Bundle model** to support grouped product/event-based bookings.
- Establish necessary relationships between Bundle, Product, and Order entities.

2. Frontend Updates

Event and Bundle Pages

- **Refactor the existing "Event" page** to become the **"Bundle" page**, adapting content and layout accordingly.
- **Create a new "Event" page**, which includes:
 - A **subpage** to view associated products/items within the event.
 - A **date selection interface** for event-specific bookings.

Order Workflow

- Update the **Order page** logic to:
 - Recognize and handle **Bundles** as a new orderable item type.
 - Reflect the updated processing logic for Bundles and Events.

Cart Logic

- Refactor the existing JavaScript responsible for adding items to the cart:
 - Ensure compatibility with the new **Bundle** model.
 - Maintain support for **Products**, **Events**, and **Bundles** distinctly.

Checkout Page

- Enhance the checkout flow to:
 - Allow selection of **two distinct payment methods**:
 - **PayPal Integration**
 - **Online payment with screenshot upload**
 - Trigger different backend workflows based on the selected payment method.
 - Redirect users to a **Payment Success page** post-confirmation.

3. Admin Dashboard Updates

- Add a new interface to:
 - **Create and manage Events**
 - **Assign/reassign products** to specific Events or Bundles
- Include administrative controls for:
 - Setting available booking dates for Events
 - Managing stock allocation per Event/Bundle
